

W E A R E IN THE IFAT ERA...

... and write the year 2020. On the Blue Planet the future of mankind is in danger. Increasing scarcity of strategic water (drinking water from supply pipes) leads to disease, conflict and migration. The forces of good are fighting against the threat of extinction with the generation project ZEROWATERLOSS. New instruments were to be presented in the 5th month in the Munich settlement: the ECOCEM full protection pipe, the BLS valves, AUTOCO a fully automatic leak detection and network monitoring technology as well as the new ORTOMAT (LORA) loggers ... HYDROPORT, the control centre for all SMARTVILLAGE and SMARTCITY applications was prepared. But evil reacted. It sent its legions, which spread fear and death with viruses and brought the IFAT time to a standstill. Pipes and other products from distant galaxies could no longer be delivered. It took its revenge that too many people paid homage to the gods of the cheapest offers for too long. When even in the galaxy of Europe infrastructures collapsed and the waters retreated deeper and deeper into the earth, the moment of rethinking had come. More and more people realized how important it is to preserve know-how and qualified jobs, how important it is to reduce environmental pollution by using regional products and by using recycled and recyclable raw materials. All these people found solutions in the new CATALOGUE SYSTEM ZEROWATERLOSS and they could rely on the performance and delivery capability of the VONROLL HYDRO WATERKNIGHTS - anytime.
