

CHAPTER 10 – TELL & STOPR

What has happened so far: The forces of evil attacked the Blue Planet around 2019 with water shortages and C19. The VONROLL HYDRO WATERKNIGHTS fight for the ZEROWATERLOSS generation project with TELL and the forces of good.

The flood after the drought. In summer 2021 of the western calendar rain fell over the alpine republic on an unprecedented scale. The initial delight of full reservoirs was short-lived and was replaced with pumping out the Helvetian catacombs, which in turn caused a flood, which had to be managed by those financial institutions whose business is the clever combination of statistics and probability calculation, hereinafter called „insurance“. The flood demonstrated how sensitively drinking water supplies respond to a penetrating poison. TELL and the WATER-KNIGHTS have been working on a solution to the problem for some time now... a defensive shield is necessary... a ... STOPR.

Perfect timing ... STOPR has completed its training and testing phase and is now fit for use to protect the STRATEGIC WATER. Even minimal penetration forces of 0.003 bar mean that STOPR closes off HYDRANT ACCESSSES safely and without leaks. When the danger is over or if water escapes, STOPR opens automatically. STOPR has better flow values than many HYDRANT TOWERS without securing its gates.

When STOPR and the TELL sensor are used together in the Storz cover, all HYDRANT TOWERS (even those that are not VONROLL) become invincible defensive shields for STRATEGIC WATER. Orders can be placed by calling 0800 882 020 or within the framework of a ZEROWATER-LOSS pilot project.
